# Introduction

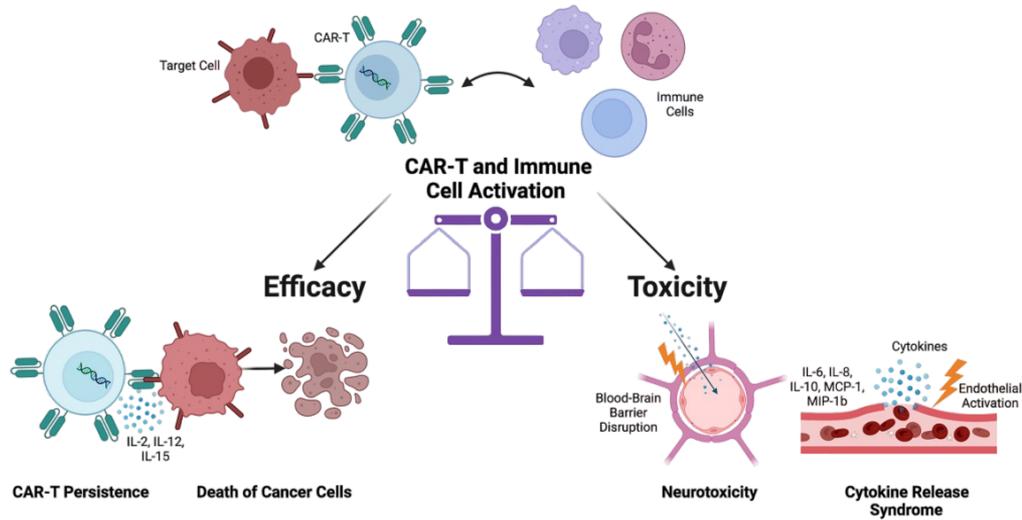

- Chimeric Antigen Receptor-T (CAR-T) cell therapy has transformed treatment of hematological malignancies

BioRender

# Introduction

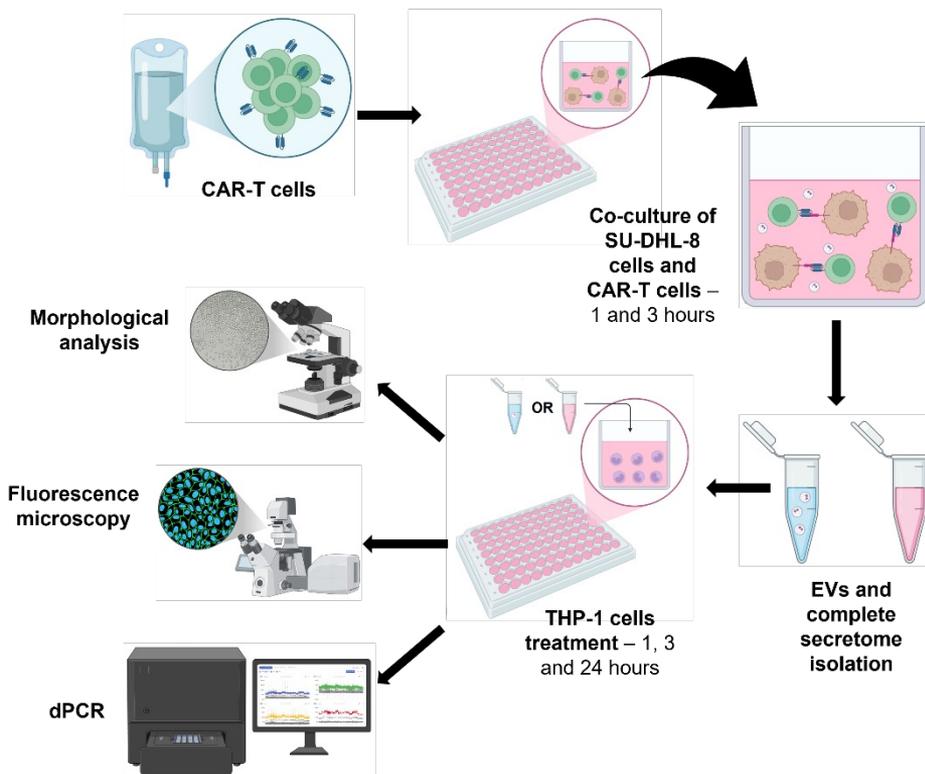

- Chimeric Antigen Receptor-T (CAR-T) cell therapy has transformed treatment of hematological malignancies
- Accompanied by varying types and grades of immune-mediated toxicities
  - Still not fully elucidated
  - The monocyte-macrophage lineage appears to play a significant role
- We investigated how CAR-T cells interact with monocytes and trigger immune activation

Chohan K.L., et al. *Curr Hematol Malig*, 2023

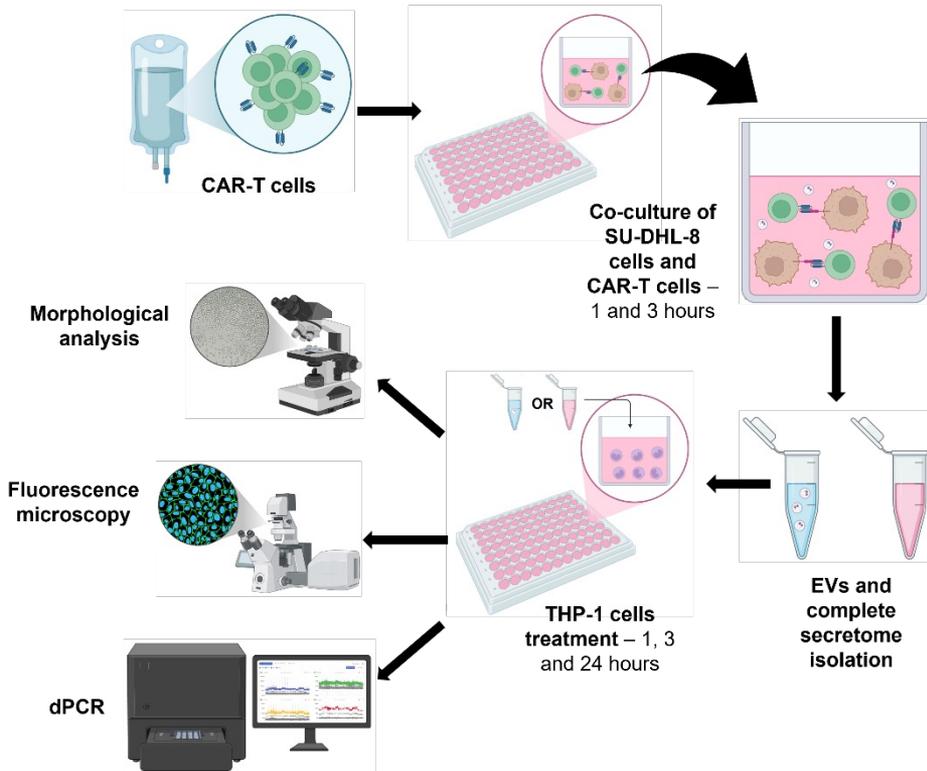

## Material and Methods

- 8 patients
  - 4 with Diffuse Large B-cell Lymphoma
  - 4 with Follicular Lymphoma
- Both axi-cel and tisa-cel products were considered

## Material and Methods

- CAR-T cells were co-cultured with an *in vitro* model of CD19+ lymphoma, SU-DHL-8
  - For 1 and 3 hours
- Isolation of EVs and complete secretome (SECR) and administration to THP-1 cells
  - For 1, 3 and 24 hours
- Monocyte-to-macrophage transition (MMt) evaluation via morphological and molecular analysis
- EVs uptake evaluation via fluorescence microscopy

## Material and Methods

### Morphological analysis

- Evaluation of cell structure
- Identification of cellular alteration

### Molecular analysis

- Analysis of nucleic acids
- Study of gene expression

### Cytokines expression

- Quantification of pro- and anti-inflammatory cytokines

### Morphological analysis

- Evaluation of cell structure
- Identification of cellular alteration

### Molecular analysis

- Analysis of nucleic acids
- Study of gene expression

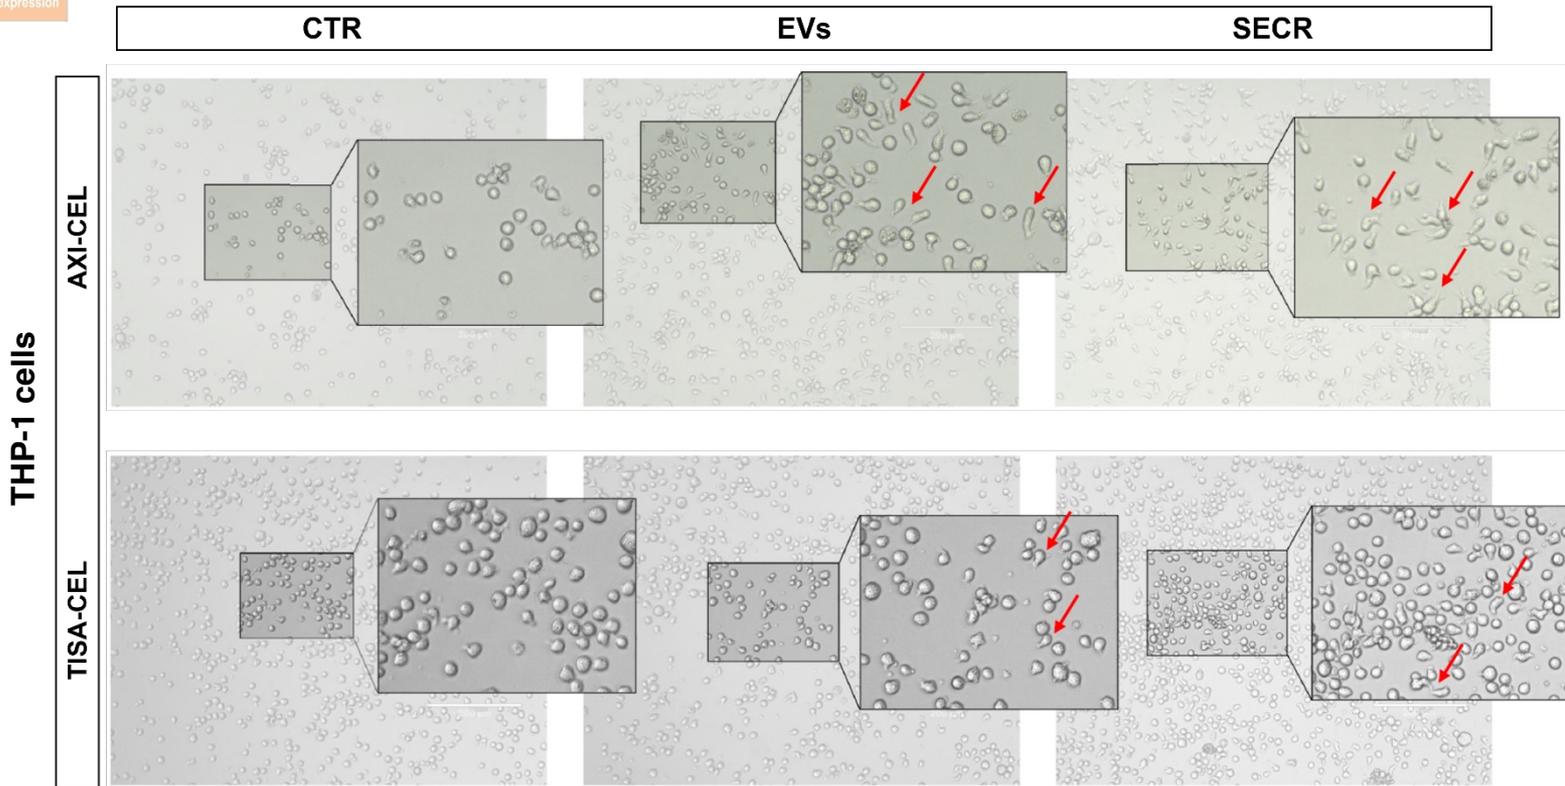

### Cytokines expression

- Quantification of pro- and anti-inflammatory cytokines

# Morphological changes

Unpublished data

### Morphological analysis

- Evaluation of cell structure
- Identification of cellular alteration

### Molecular analysis

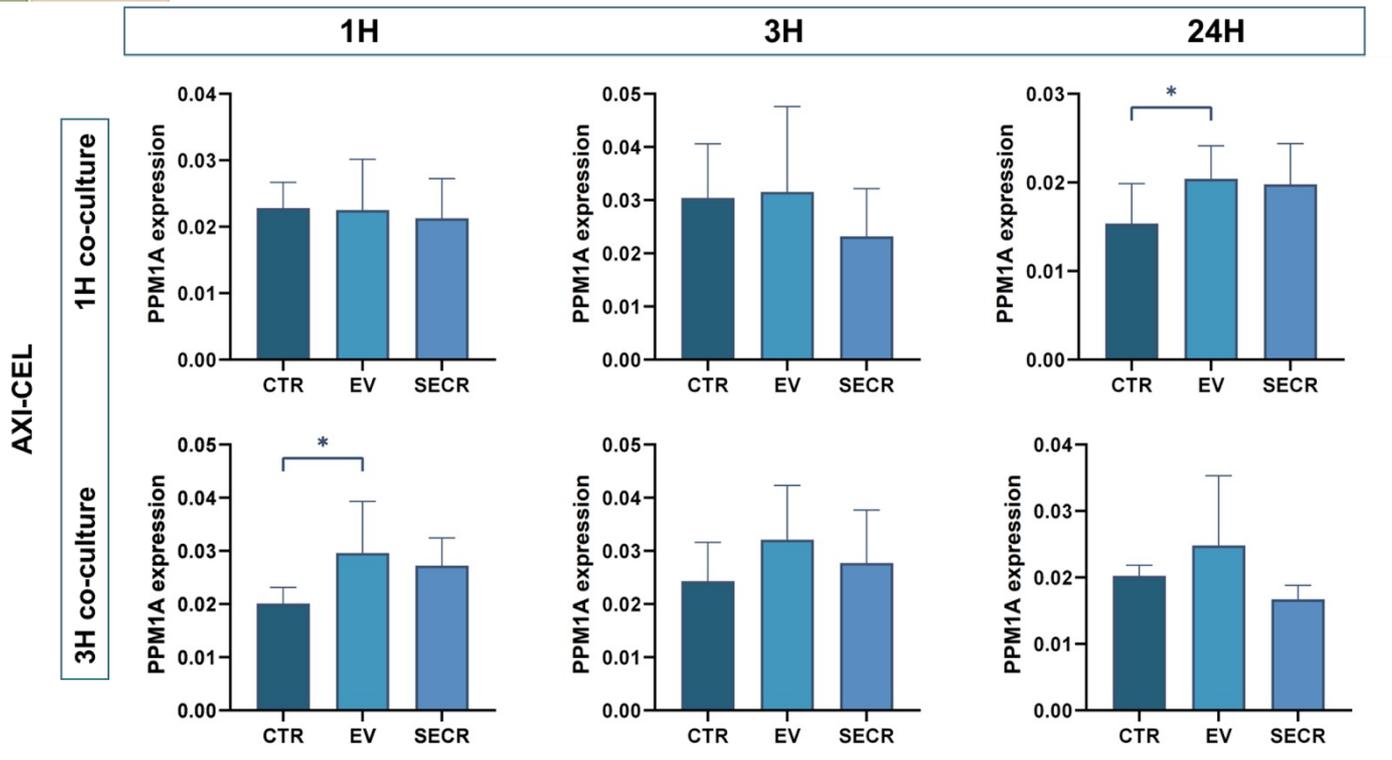

- Analysis of nucleic acids
- Study of gene expression

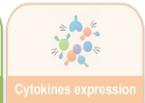

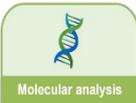

### Cytokines expression

- Quantification of pro- and anti-inflammatory cytokines

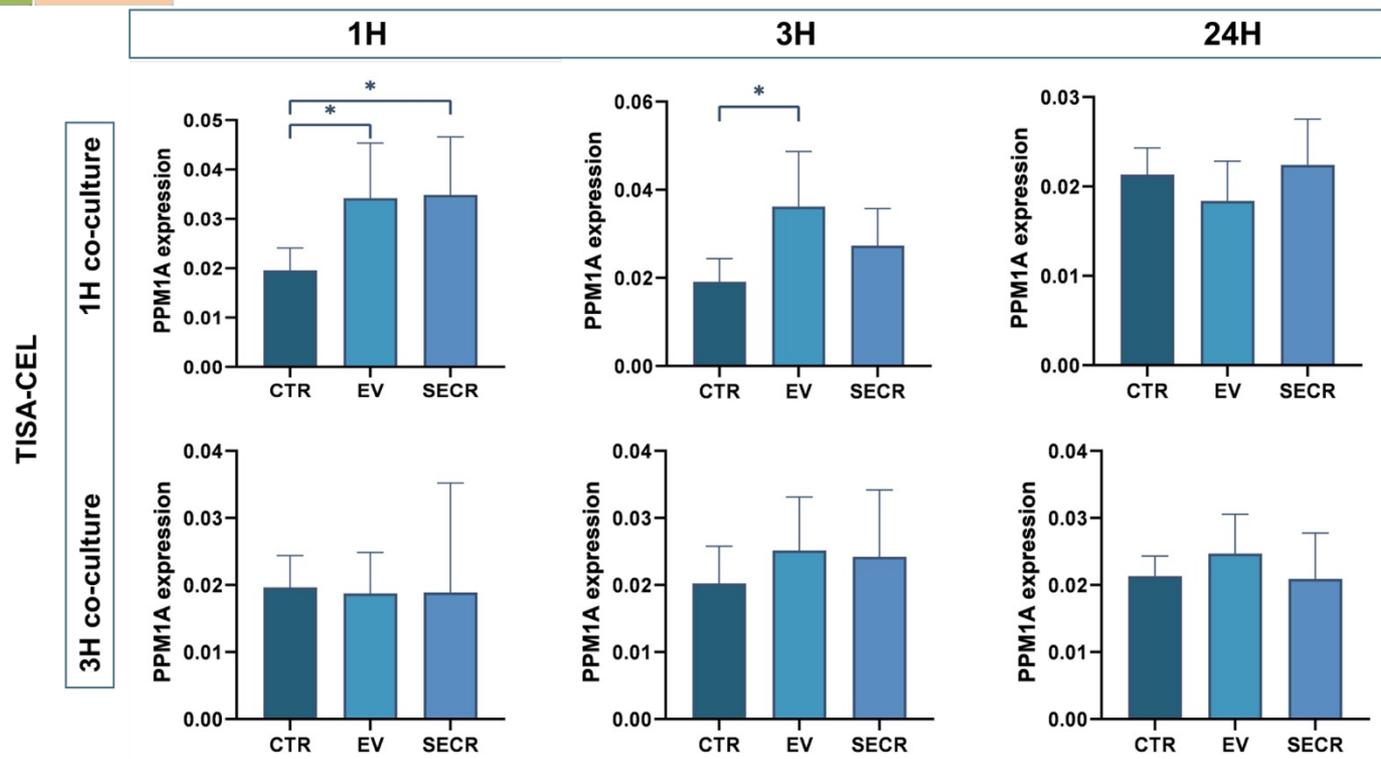

# PPM1A expression

Unpublished data

# PPM1A expression

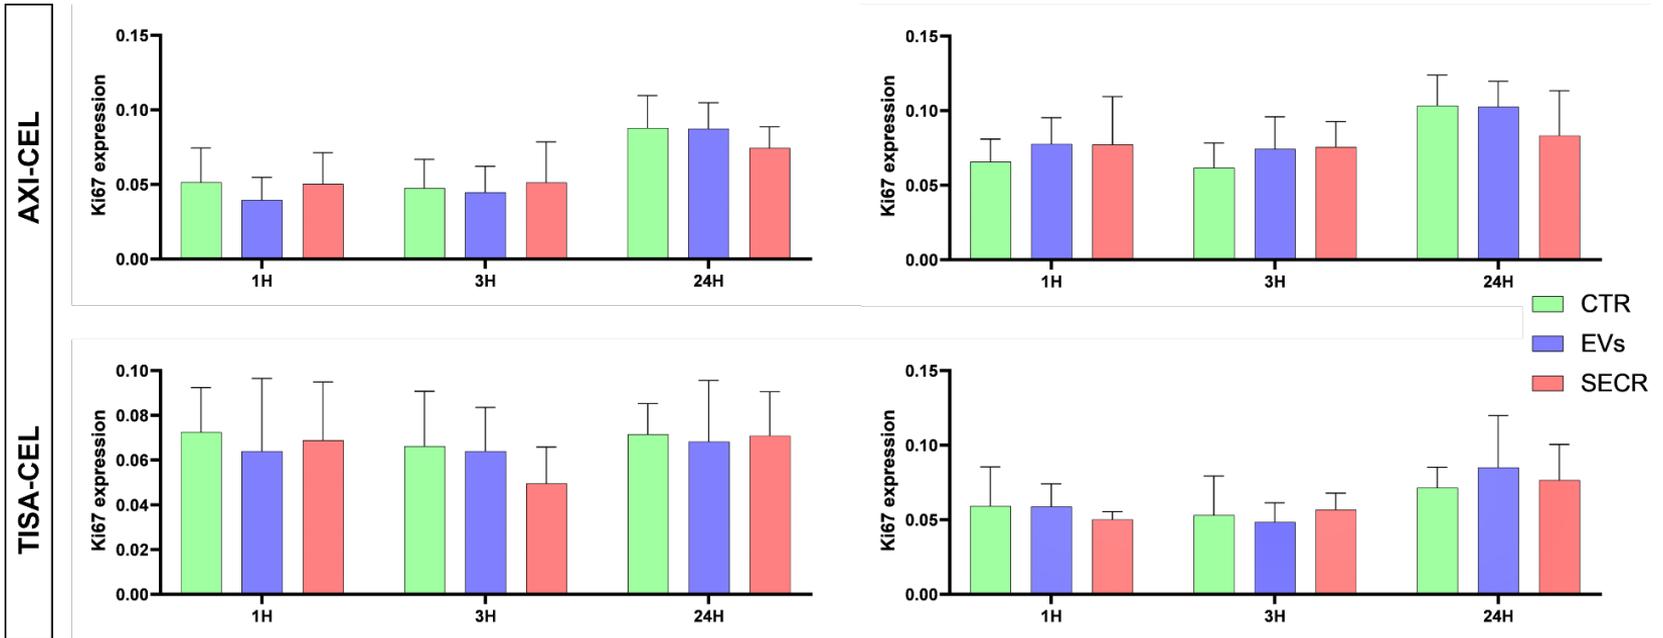

Unpublished data

# Ki67 expression

1h of co-culture

3h of co-culture

Unpublished data

### Morphological analysis

- Evaluation of cell structure
- Identification of cellular alteration

### Molecular analysis

- Analysis of nucleic acids
- Study of gene expression

### Cytokines expression

- Quantification of pro- and anti-inflammatory cytokines

Morphological analysis

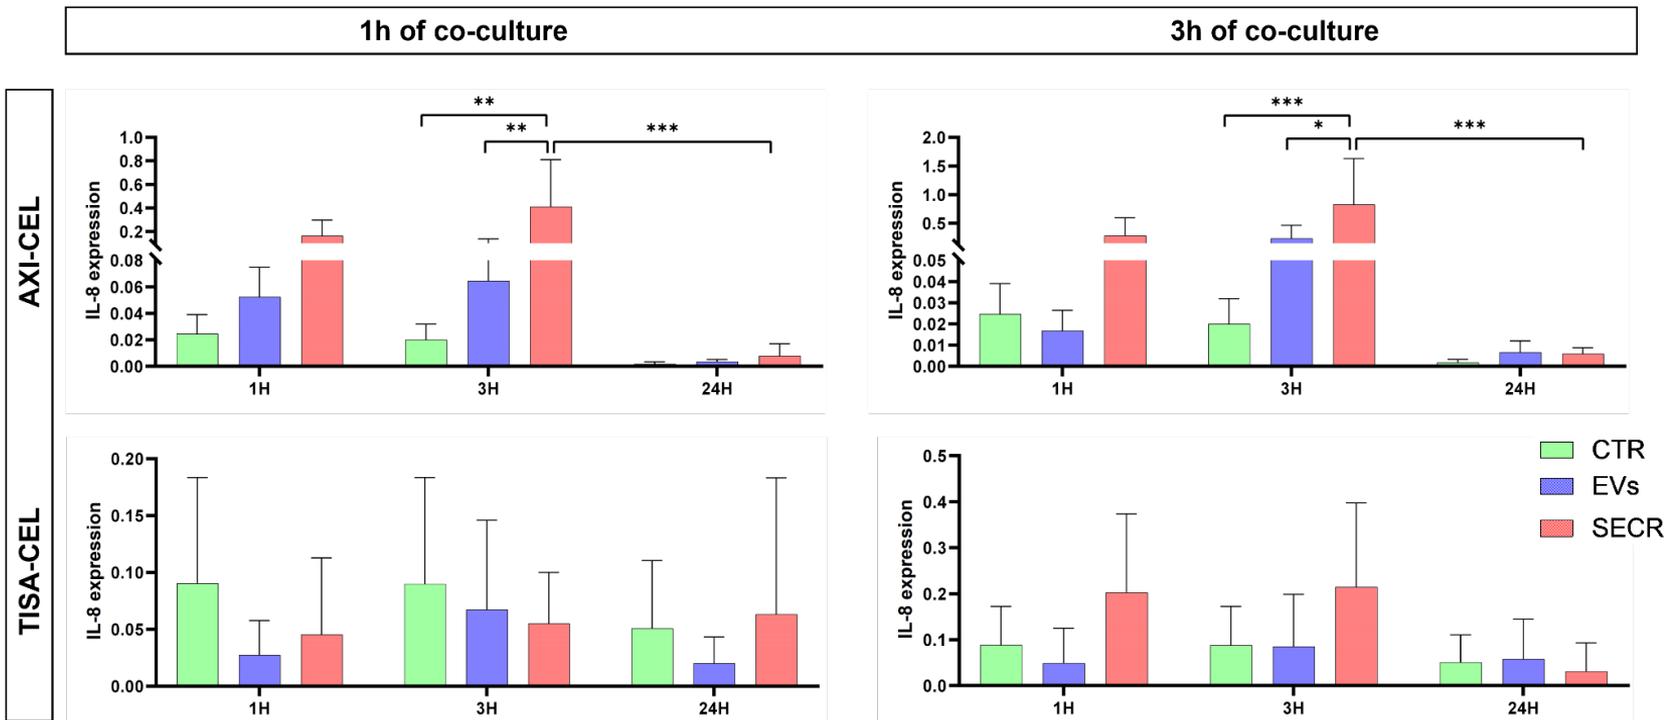

Molecular analysis

Cytokines expression

# Cytokines expression

11 Cytokines:

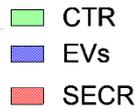

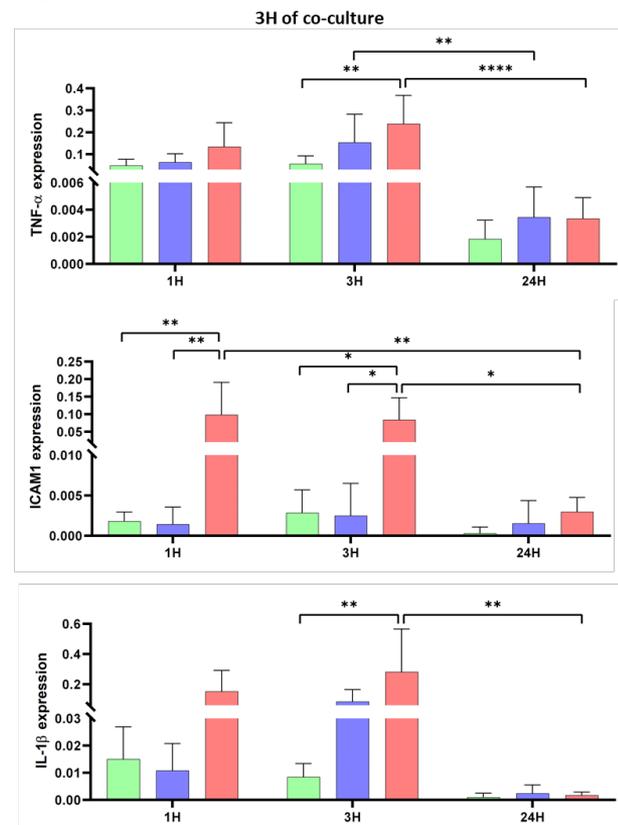

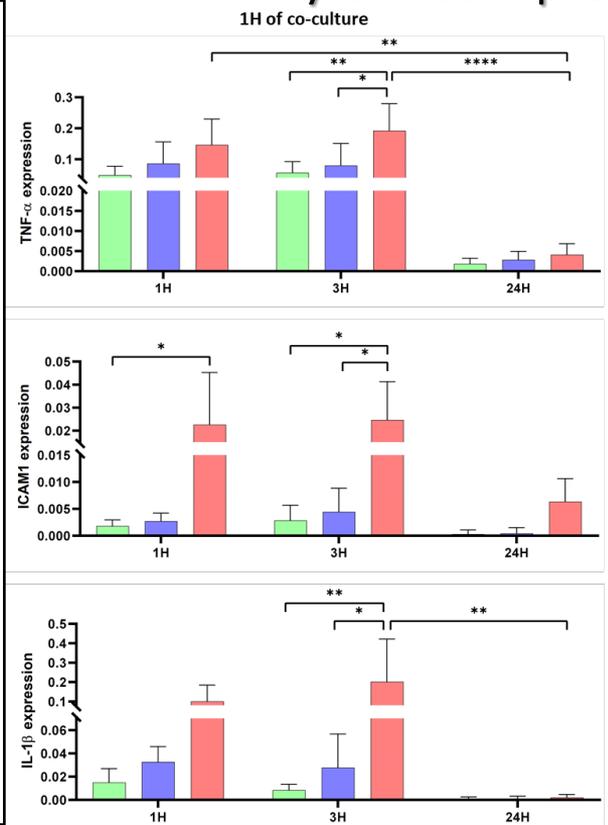

- **IL-8**
- IL-6
- TNF- $\alpha$
- IL-1 $\beta$
- IL-10
- IL-2
- INF- $\gamma$
- ICAM1
- IL-17a
- IL-RN
- MMP9

Unpublished data

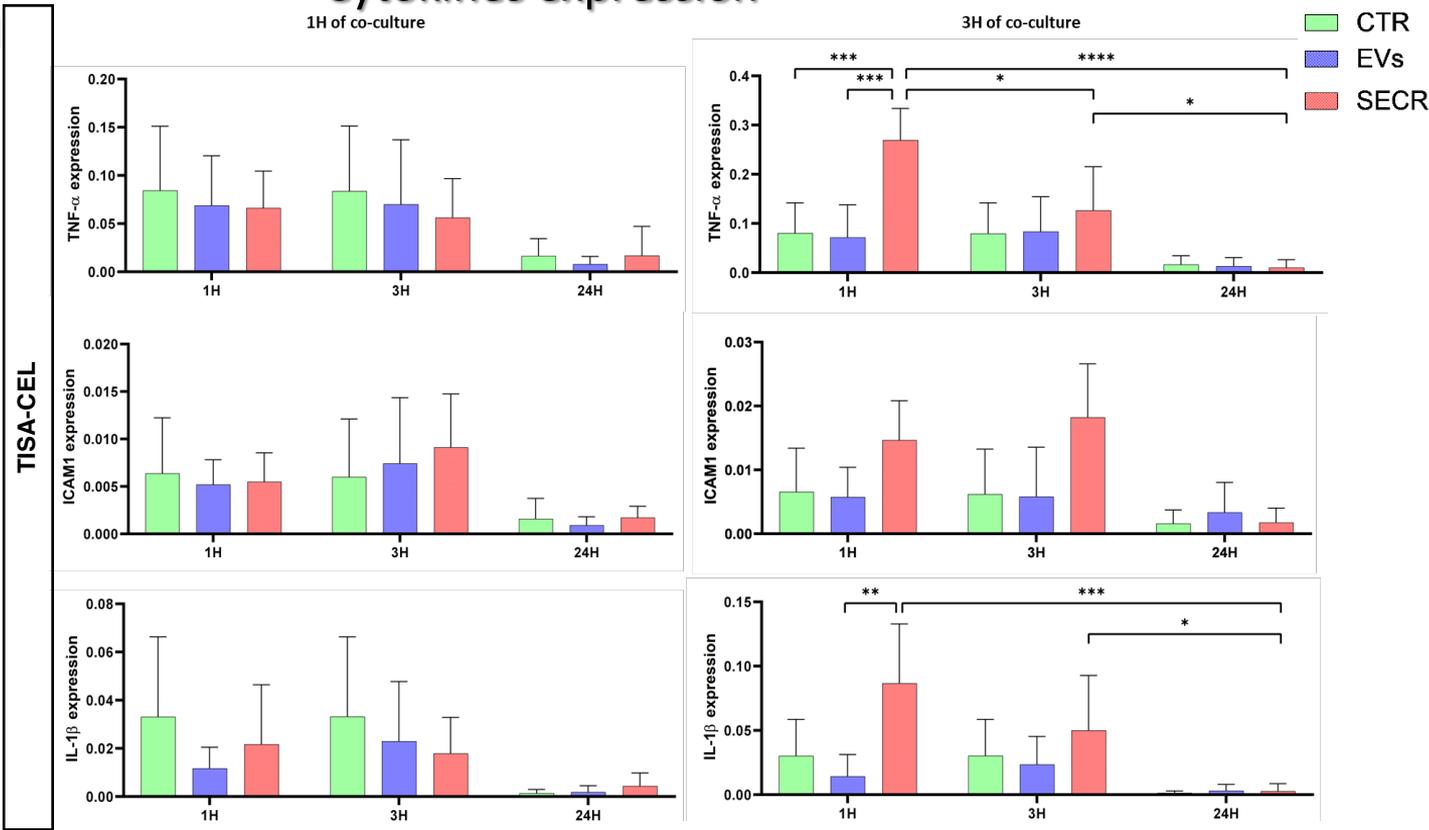

# Cytokines expression

AXI-CEL

Unpublished data

# Cytokines expression

Unpublished data

### Morphological analysis

- Evaluation of cell structure
- Identification of cellular alteration

### Molecular analysis

- Analysis of nucleic acids
- Study of gene expression

### Cytokines expression

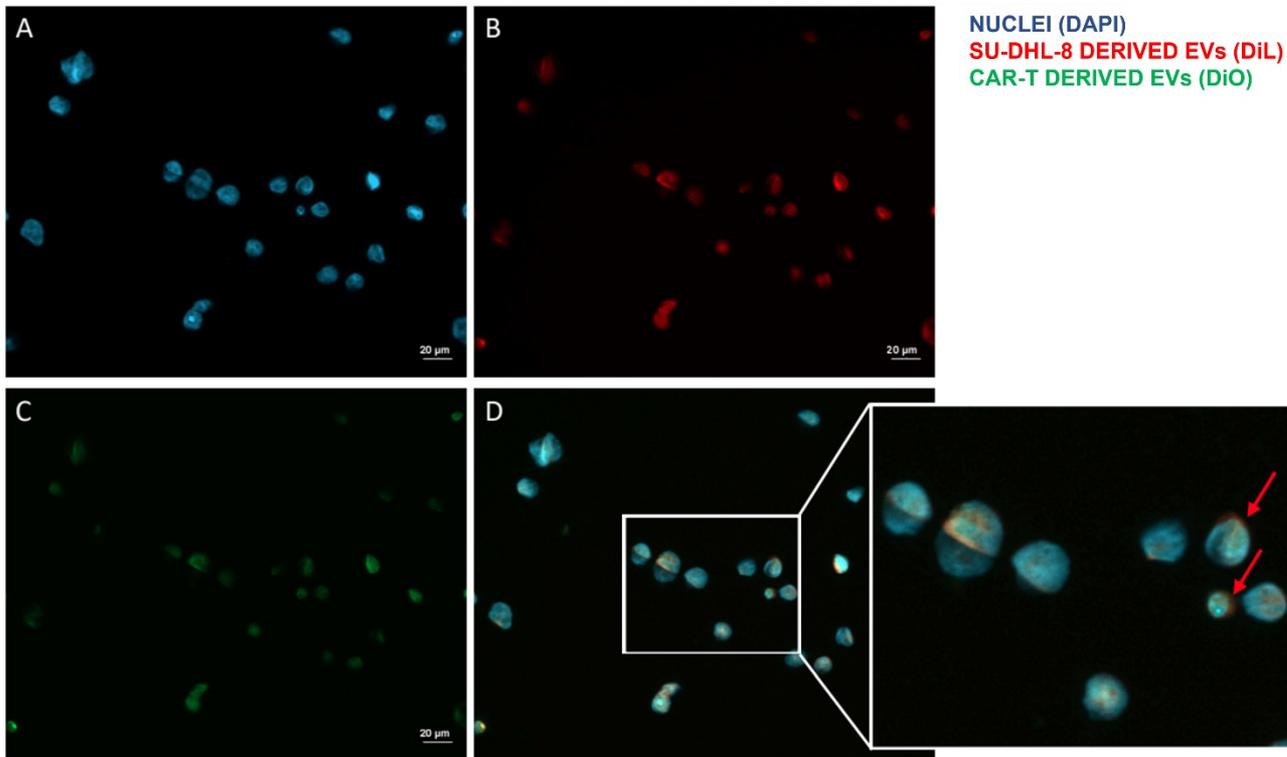

- Quantification of pro- and anti-inflammatory cytokines

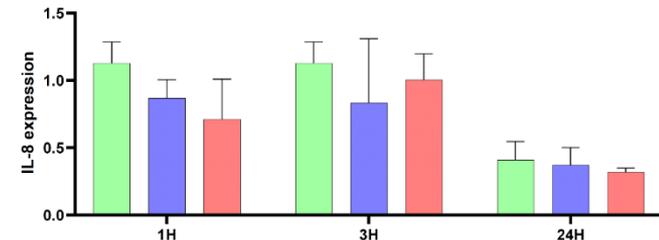

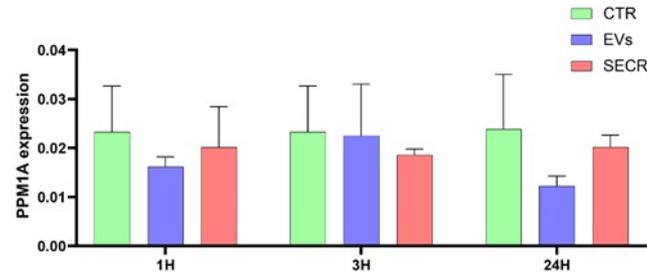

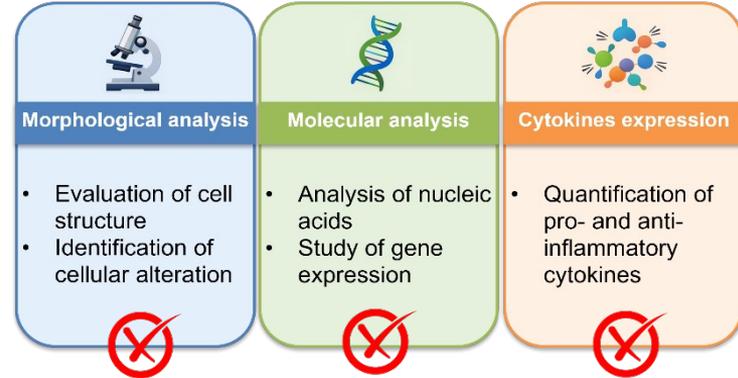

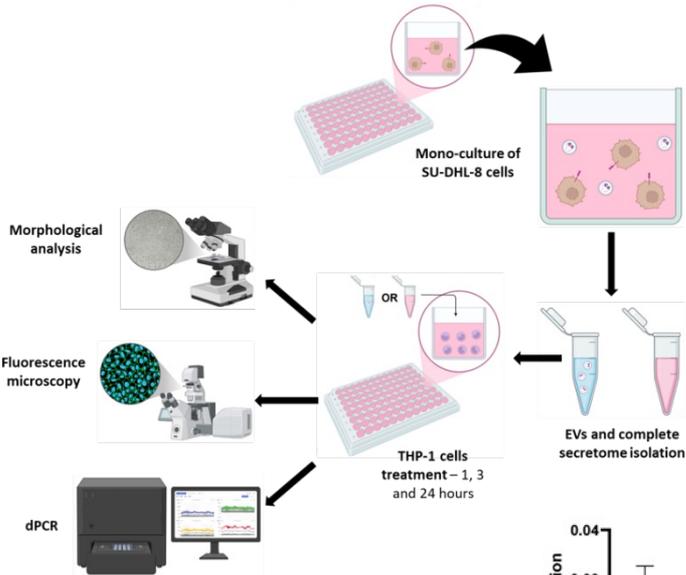

## EVs uptake

40X

*Unpublished data*

## “Negative” controls – Naïve SU-DHL-8

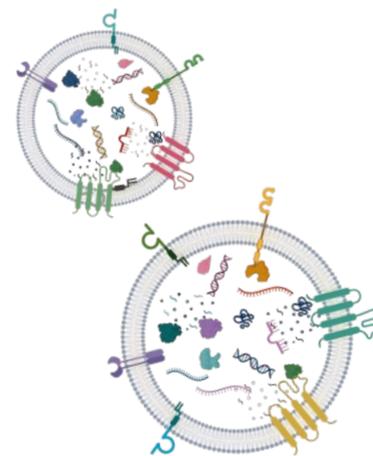

Unpublished data

## Conclusions

- CAR-T cells release factors capable of inducing MMt and pro-inflammatory activation of immune system;
- Key role of CAR-T-derived EVs/SECR in modulating innate immune responses;
- Identify potential targets to modulate immune activation and improve clinical outcomes in CAR-T-treated patients.

Future perspectives:

- EVs cargo characterization;
- Proteomic analysis;
- Plasma-derived EVs activity.
